

T&C-Ultradrive™

IMPACT RATED DRIVERS

Elevate your toolkit with our precision-engineered impact rated drivers – designed for durability, performance, and reliability on every job.

Made in the U.S.A.

Town & Country
INDUSTRIES
Wholesale Aluminum and Building Products

KEY FEATURES

Innovative Lobular Design

Our unique lobular design engages the sides of screws rather than the corners. This minimizes rounding and significantly reduces coating damage, keeping your fasteners pristine.

100% Made in the U.S.A.

Proudly manufactured entirely in the United States, ensuring superior craftsmanship and quality control with every tool.

Hardened Steel Construction

Crafted from hardened steel, these drivers are built to last. They are guaranteed not to fail under normal use*

Special Torsion Drive

Featuring a specially engineered "Torsion" 6" #2 & #3 Philips drive, these tools are ideal for installing and removing windows. The torsion drive is designed to flex, reducing wear on both old and new installation screw heads.

Color-Coded for Easy Selection

Each driver comes with a distinct color coating, allowing for quick and easy identification on the job site.

Impact Tool Rated

While our drivers are rated for impact tools, we advise against using impact drills on any coated screw to maintain the integrity of the coating.

**Drivers are guaranteed not to fail under normal use. (Colored coating is not covered.)*
